

JULES ROPARS

+1 (206) 714-5719 | jropars@cs.washington.edu | [linkedin.com/in/Jropars](https://www.linkedin.com/in/Jropars)

EDUCATION

University of Washington, Paul Allen Institute of Computer Science

Expected Jun. 2027

Bachelor's, Computer Science with Focus on Data Science

CSE GPA: 3.78

- **Relevant Courses:** Data Structures & Parallelism, Software Design & Implementation, Matrix Algebra with Applications, Hardware/Software Interface

PROFESSIONAL EXPERIENCE

AUGER

Bellevue, WA

AI Ontology & Software Engineering Intern

March 2025 – September 2025

- Built out ontology for AI data management and worked to centralize logistics data for pipeline ingestion.
- Implemented production code for mass tagging of ontic logistics infrastructure in the supply chain.

UW MAKEABILITY LAB

Seattle, WA

Machine Learning Researcher

September 2024 – March 2025

- Developed alongside postgraduate students a tool to help wheelchair users navigate the world by using AI to mark sidewalks with curbs, wheelchair ramps, etc.
- Accelerated nightly database clustering by ~500% applying Density-Based Spatial Clustering of Applications with Noise (DBSCAN).
- Project: makeabilitylab.cs.washington.edu

ABBOTT

Alameda, CA

AI/ML and Data Science Intern

August 2023 – September 2023 & July 2024 - September 2024

- Designed and deployed a centralized intranet database (Elasticsearch+ Kibana) for the Diabetes Division.
- Built program to continually consolidate and re-index data from out-scaled sources (e.g., excel, google sheets).
- Enabled the dynamic data visualization of 30,000+ employee records, streamlining HR operations.
- Performed a comparative analysis of current enterprise architecture frameworks and tools (e.g., Gartner, TOGAF, LeanIX).
- Published findings on Medium (With Approval): [Medium Article](#)

NEOHACKS

Seattle, WA

Organizer & Host

June 2022 - July 2022

- Hosted the 48-hour hackathon for over 500 participants from Europe, Africa, and the Americas.
- Built the registration website, team management system, and participant database.
- Hackathon: neohacks.org

ML PROJECTS

ML ASL TRANSCRIBER - [Project](#)

- Trained computer vision model to transcribe American Sign Language for 2023 Dubhacks Hackathon (team of 4).

SIMULATED WITH REINFORCEMENT LEARNING (NEAT) - [Project](#)

- Leveraged Godot game engine to showcase in real-time the creation and evolution of species based on different emergent behaviors (e.g., foraging and imprinting).

FULLY AI-DRIVEN YT ACCOUNTS - [Project](#) // [Link to Acc.](#)

- Built a system to automatically generate YouTube videos using only AI for audio, video, and content, dynamically adjusting to prior video SEO performance and a mix of google trends, social media activity, and web scraping.
- Reached over 1,000 subscribers in under 4 months and averaged 15,000+ views daily.
- Learn more Here

CUSTOM LLM - [Project](#)

- Tuned a custom LLM using TensorFlow for a Seattle-based crypto marketplace (Nibiru).

SKILLS

Skills: Reinforcement Learning, AI, Databricks, SEO, Business Analytics, Excel/Numbers/Sheets, Git, machine learning, REST APIs, AWS, Elasticsearch, R studio, PPO, NEAT, Database management

Programming Languages: Python, JavaScript, Java, (E)SQL, C/C++, HTML/CSS, TypeScript, R, MySQL

Interests: Hackathons, Rainy Days, Learning Languages, Squash, Classical History, Personal Programming Projects, Reading

Languages: French - Native, Spanish – Basic Working Proficiency, Japanese - Basic (Currently Learning)
